

Gardening Agent Notebook

Overview

- Purpose: answer gardening questions using a local SQLite database plus optional web search.
- Core modules: `agent.py` (routing and answers), `config.py` (settings and utilities), `agent_db.py` (schema and seed), `eval.py` (evaluation).
- Data: `gardening_agent_full_demo.db` seeded from `agent_db.py`.

Limitations

- Web results depend on the availability of live search (install `ddgs`).
- If models are unavailable, responses fall back to templates.

</style>  
""""  
display(HTML(styles + '<div class="full-results-wrap">' +  
html + '</div>'))
```

Seed Data

Plant profiles and sample garden data used for the demo database.

```
In [2]: # Seed data  
from agent_db import CARE_PROFILES, PERSONAL_PLANTS  
  
print(f"Seeded {len(CARE_PROFILES)} care profiles and  
{len(PERSONAL_PLANTS)} plants.")
```

Seeded 10 care profiles and 11 plants.

Database Setup

Creates tables and seeds the demo database.

```
In [3]: # Database setup  
import importlib  
import agent_db  
from config import DB_PATH  
  
importlib.reload(agent_db)  
setup_database = agent_db.setup_database  
  
setup_database()  
print(f"Database ready: {DB_PATH}")
```

Database ready: gardening_agent_full_demo.db

Tooling Setup

Registers SQL helpers and web-search utilities.

```
In [4]: # Tool functions
        from config import execute_sql, pretty_rows, search_web

        print('Tool layer ready.')
```

Tool layer ready.

```
In [5]: # Agent logic and model benchmarking
        from agent import expected_route_from_keywords, route_query

        print('Agent logic ready.')
```

Agent logic ready.

```
In [6]: # Agent orchestration
        from agent import handle_query

        print('Agent orchestration ready.')
```

Agent orchestration ready.

Evaluation Suite: Prompting, Caching, Distillation, Security

The next cells run structured evaluation helpers for prompting, caching, distillation, and security. These cells are for analysis and do not modify the core agent logic.

Security Considerations

- Guardrails: denylist for unsafe patterns (SQL injection, secrets, exfiltration) and allowlist for gardening-only scope.
- Refusals: unsafe or out-of-scope queries return a structured refusal response.
- Tool safety: write access is restricted to the shopping_list table; other writes are rejected.
- Remaining risks: heuristic filters can miss edge cases; no sandboxing beyond tool restrictions.

```
In [7]: # Imports for evaluation helpers (prompting, caching,
distillation, security)
from config import pd, display
from eval import distill_answer, run_cache_demo,
run_prompting_techniques, run_security_tests

# The following cells run each step and display results in
separate blocks.
```

```

In [8]: # Security tests
security_results = run_security_tests()
if pd is not None:
    display_full(pd.DataFrame(security_results.get('llm_tests',
[])))
    display_full(pd.DataFrame(security_results.get('sql_tests',
[])))
else:
    print('Security LLM results:',
security_results.get('llm_tests'))
    print('Security SQL results:',
security_results.get('sql_tests'))

```

SQL examples

- What is the watering schedule for my banana plant?
Based on your watering schedule, water every 2 days, about 1200 ml. Last watered: 2026-05-18. Next due: 2026-05-20.
- Does my Monstera need repotting based on my logs?
Based on the latest repotting record, repot needed: Yes. Checked on 2026-03-17 with pot size 10.0 in. Notes: Roots beginning to circle the pot..
- Show my shopping list.
Current shopping list: plant ties (open, low); neem oil (open, high); peat-free potting soil (open, medium)

Web examples

- Find a nursery near zip code 94582 selling neem oil.
I cannot verify live store inventory from the current web tool. Best next step: call garden centers, hardware

stores, or hydroponic shops near 94582 and ask for cold-pressed neem oil before you go.

– Find a video on pruning roses.

Look for a university extension or master gardener rose-pruning video. A good tutorial should show three things: remove dead or crossing canes, open the center for airflow, and cut just above outward-facing buds.

– What are eco-friendly pest control methods?

Eco-friendly pest control starts with identifying the pest, removing heavily affected leaves, spraying with water, and using barriers or traps before pesticides. If needed, use insecticidal soap, neem oil, or horticultural oil according to the label, and avoid spraying when pollinators are active.

Hybrid examples

– Is today's temperature safe for my outdoor Hibiscus in San Ramon?

Hibiscus's safe range is 18–33C (64–91F). San Ramon forecast for 2026-05-20: high 86F / low 58F. That low is below the safe range, so protect it or bring it inside overnight.

– Is it going to rain in San Ramon tomorrow? Should I skip watering?

San Ramon forecast for 2026-05-21: 0% chance of precipitation, 0.00 in expected, high 84F / low 58F. Skip watering if the soil is already moist or if rain is likely; otherwise water based on soil moisture.

Sources: [1] Open-Meteo San Ramon Forecast: <https://open-meteo.com/>

– Should I water succulents in 90 degree weather?

For succulents in 90 degree weather, water only if the soil is fully dry. Water deeply in the early morning, avoid wetting leaves in harsh sun, and skip watering if the potting mix still feels damp.

Prompting, cache, distillation, and security

Each table below is split into its own display block so the notebook reads more cleanly.

```
In [15]: if 'prompting_results' in globals() and prompting_results:
